Education

International Institute of Information Technology (IIIT), Naya Raipur **Expected May 2028**
Bachelor of Technology in Data Science and Artificial Intelligence *CGPA: 8.67/10.0*

Relevant Coursework

Data Structures & Algorithms | Machine Learning | Foundations of AI | Statistical Data Analysis | Object-Oriented Programming | Database Management Systems | Operating Systems | Reinforcement Learning | Data Mining

Technical Skills

Programming Languages: C++, Java, Python, SQL
AI / ML: RAG, LLMs, Agentic Workflows, PyTorch, Tensorflow
Frameworks & Libraries: FastAPI, React, Node.js, LangChain, LangGraph, Pydantic AI
Databases: MySQL, Neo4j, ChromaDB, PineCone, FAISS
Developer Tools: Git, Docker, VSCode, Arduino IDE

Projects

Codrix.ai | *Go, React 18, Node.js, AWS Bedrock, tree-sitter, RAG, Docker* | Live

- Built **contextplus**, a custom code intelligence engine using tree-sitter AST parsing across **36 programming languages** with Jina AI vector embeddings for semantic code search
- Designed a **RAG-powered agentic pipeline** on Amazon Bedrock (Claude Sonnet 4) with multi-round tool-use loop (up to 6 rounds) for conversational Q&A over any GitHub repository
- Engineered a **Go HTTP backend** on AWS EC2 with Server-Sent Events for real-time progress streaming; integrated Bedrock Converse API with exponential backoff retry and automatic Groq LLaMA fallback
- Designed a **Prompt-to-Diagram engine** generating Architecture, UML Sequence, and ER diagrams from live code via LLM inference, with natural-language post-generation editing support

Experience & Achievements

Amazon's AI for Bharat Hackathon **Prototype Submission Phase**
Amazon Web Services

- Advanced to the prototype submission phase of Amazon's AI for Bharat Hackathon, a nationwide competition focused on AI-driven solutions for India
- Developed and presented **Codrix.ai** as the hackathon project, leveraging Amazon's AWS services including AWS Bedrock, EC2, and the Bedrock Converse API for intelligent code analysis and Q&A
- Utilized AWS infrastructure to build a production-grade RAG pipeline with real-time streaming, exponential backoff, and multi-language code intelligence capabilities
